Summary

Cloud-native engineer crafting scalable systems, automating infrastructure, and deploying AI-driven solutions with measurable impact. Skilled at turning chaos into resilient architectures while thriving in fast-paced, impact-driven teams.

Skills

Languages: Python, C++, Java, TypeScript, Dart
Frameworks: Flask, Django, FastAPI, Spring Boot, React, Flutter
Cloud & DevOps: Docker, Kubernetes, AWS, GCP, Azure, Terraform, GitLab CI/CD, Kafka
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Redis, BigQuery
ML/NLP: scikit-learn, pandas, NumPy, Selenium, NLTK, spaCy, TensorFlow (basic)
Tools: Git, REST, WebSocket, OAuth2, Bash, pytest, Jest
OS: Linux (Ubuntu)

Experience

BlackCoffer (Remote)
Data Scientist Intern Dec 2024 – Mar 2025

- Engineered and deployed **BetterQuery**, a GPT-4 powered Flask API, enabling analysts to generate semantic Elasticsearch queries with 95% accuracy and real-time validation.
- Automated **AdSense Data Fetcher**, building resilient OAuth2 + BigQuery pipelines that reduced manual reporting by 90% and cut ETL failures by 70%.

Education

Lovely Professional University
B.Tech in Computer Science **AUG 2025**
Capstone: Sentiment Analysis Web App (Flask + Selenium)

Lovely Professional University
Diploma in Computer Science **MAY 2022**
CGPA: 8.6/10

Projects github.com/cayanide

Sentiment Analysis Web App

- Built and deployed a full-stack sentiment analysis platform using Flask, Selenium, and NLP libraries, processing 10k+ text samples with 85% classification accuracy.
- Automated CI/CD with Docker pipelines, reducing deployment errors by 60%.

BetterQuery: AI Search Assistant

- Developed GPT-4 powered assistant for Elasticsearch, boosting query efficiency and cutting analyst query time by 40%.
- Implemented sanitization + automated index selection, ensuring 100% safe queries in production.

AdSense Data Fetcher

- Automated OAuth2-based AdSense → BigQuery ingestion, eliminating manual data pulls.
- Reduced duplicate entries by 95% with retry + deduplication logic.

Anime Recommendation System

- Designed JWT-secured REST API in Flask + PostgreSQL, fetching metadata via AniList GraphQL.
- Deployed as Dockerized microservice with modular logging, enabling 24/7 uptime in test environments.

Certifications

Azure Security Engineer (AZ500) – Microsoft	Apr 2025
Microservices & Serverless – IBM	Jul 2024
DSA – GeeksforGeeks	Jul 2024
Kubernetes & Docker – IBM	Jun 2024
Spring Cloud – Coursera	Jun 2024

Interests

Home-lab tinkering (Nextcloud, Jellyfin, Pi-hole), algorithm challenges, open-source contributions, and tech blogging. Passionate about IoT, cloud-native infrastructure, and ethical AI.
